PRO-PAR SHOCKS

ENGINEERED FOR SAFETY. BUILT FOR PERFORMANCE.

Pro-Par® shock absorbers are precision-engineered with an 1-3/8 in. or 1-5/8 in. bore - specifically sized for demanding heavy-duty applications. Designed to deliver long-lasting performance, they feature super-finished chrome piston rods that reduce seal wear and leaks while their durable corrosion resistance extends shock life.

A 10-stage all-coil valve system ensures consistent ride control across a full range of conditions, providing superior fatigue resistance. Pro-Par's best-in-class hydraulic stop system is engineered to absorb extreme forces, enhancing overall vehicle stability and passenger safety.

BENEFITS OF PRO-PAR:

- Enhances wheel alignment retention
- Maximizes tire-to-road contact for improved handling
- Reduces tire wear, extending service life
- Contributes to shorter, more controlled braking distances
- Minimizes equipment downtime, supporting fleet reliability
